

ScamLens

Paste the message. See the scam.

Checks suspicious SMS, WhatsApp texts, links, UPI requests, and QR codes.

SCAMLENS / 01

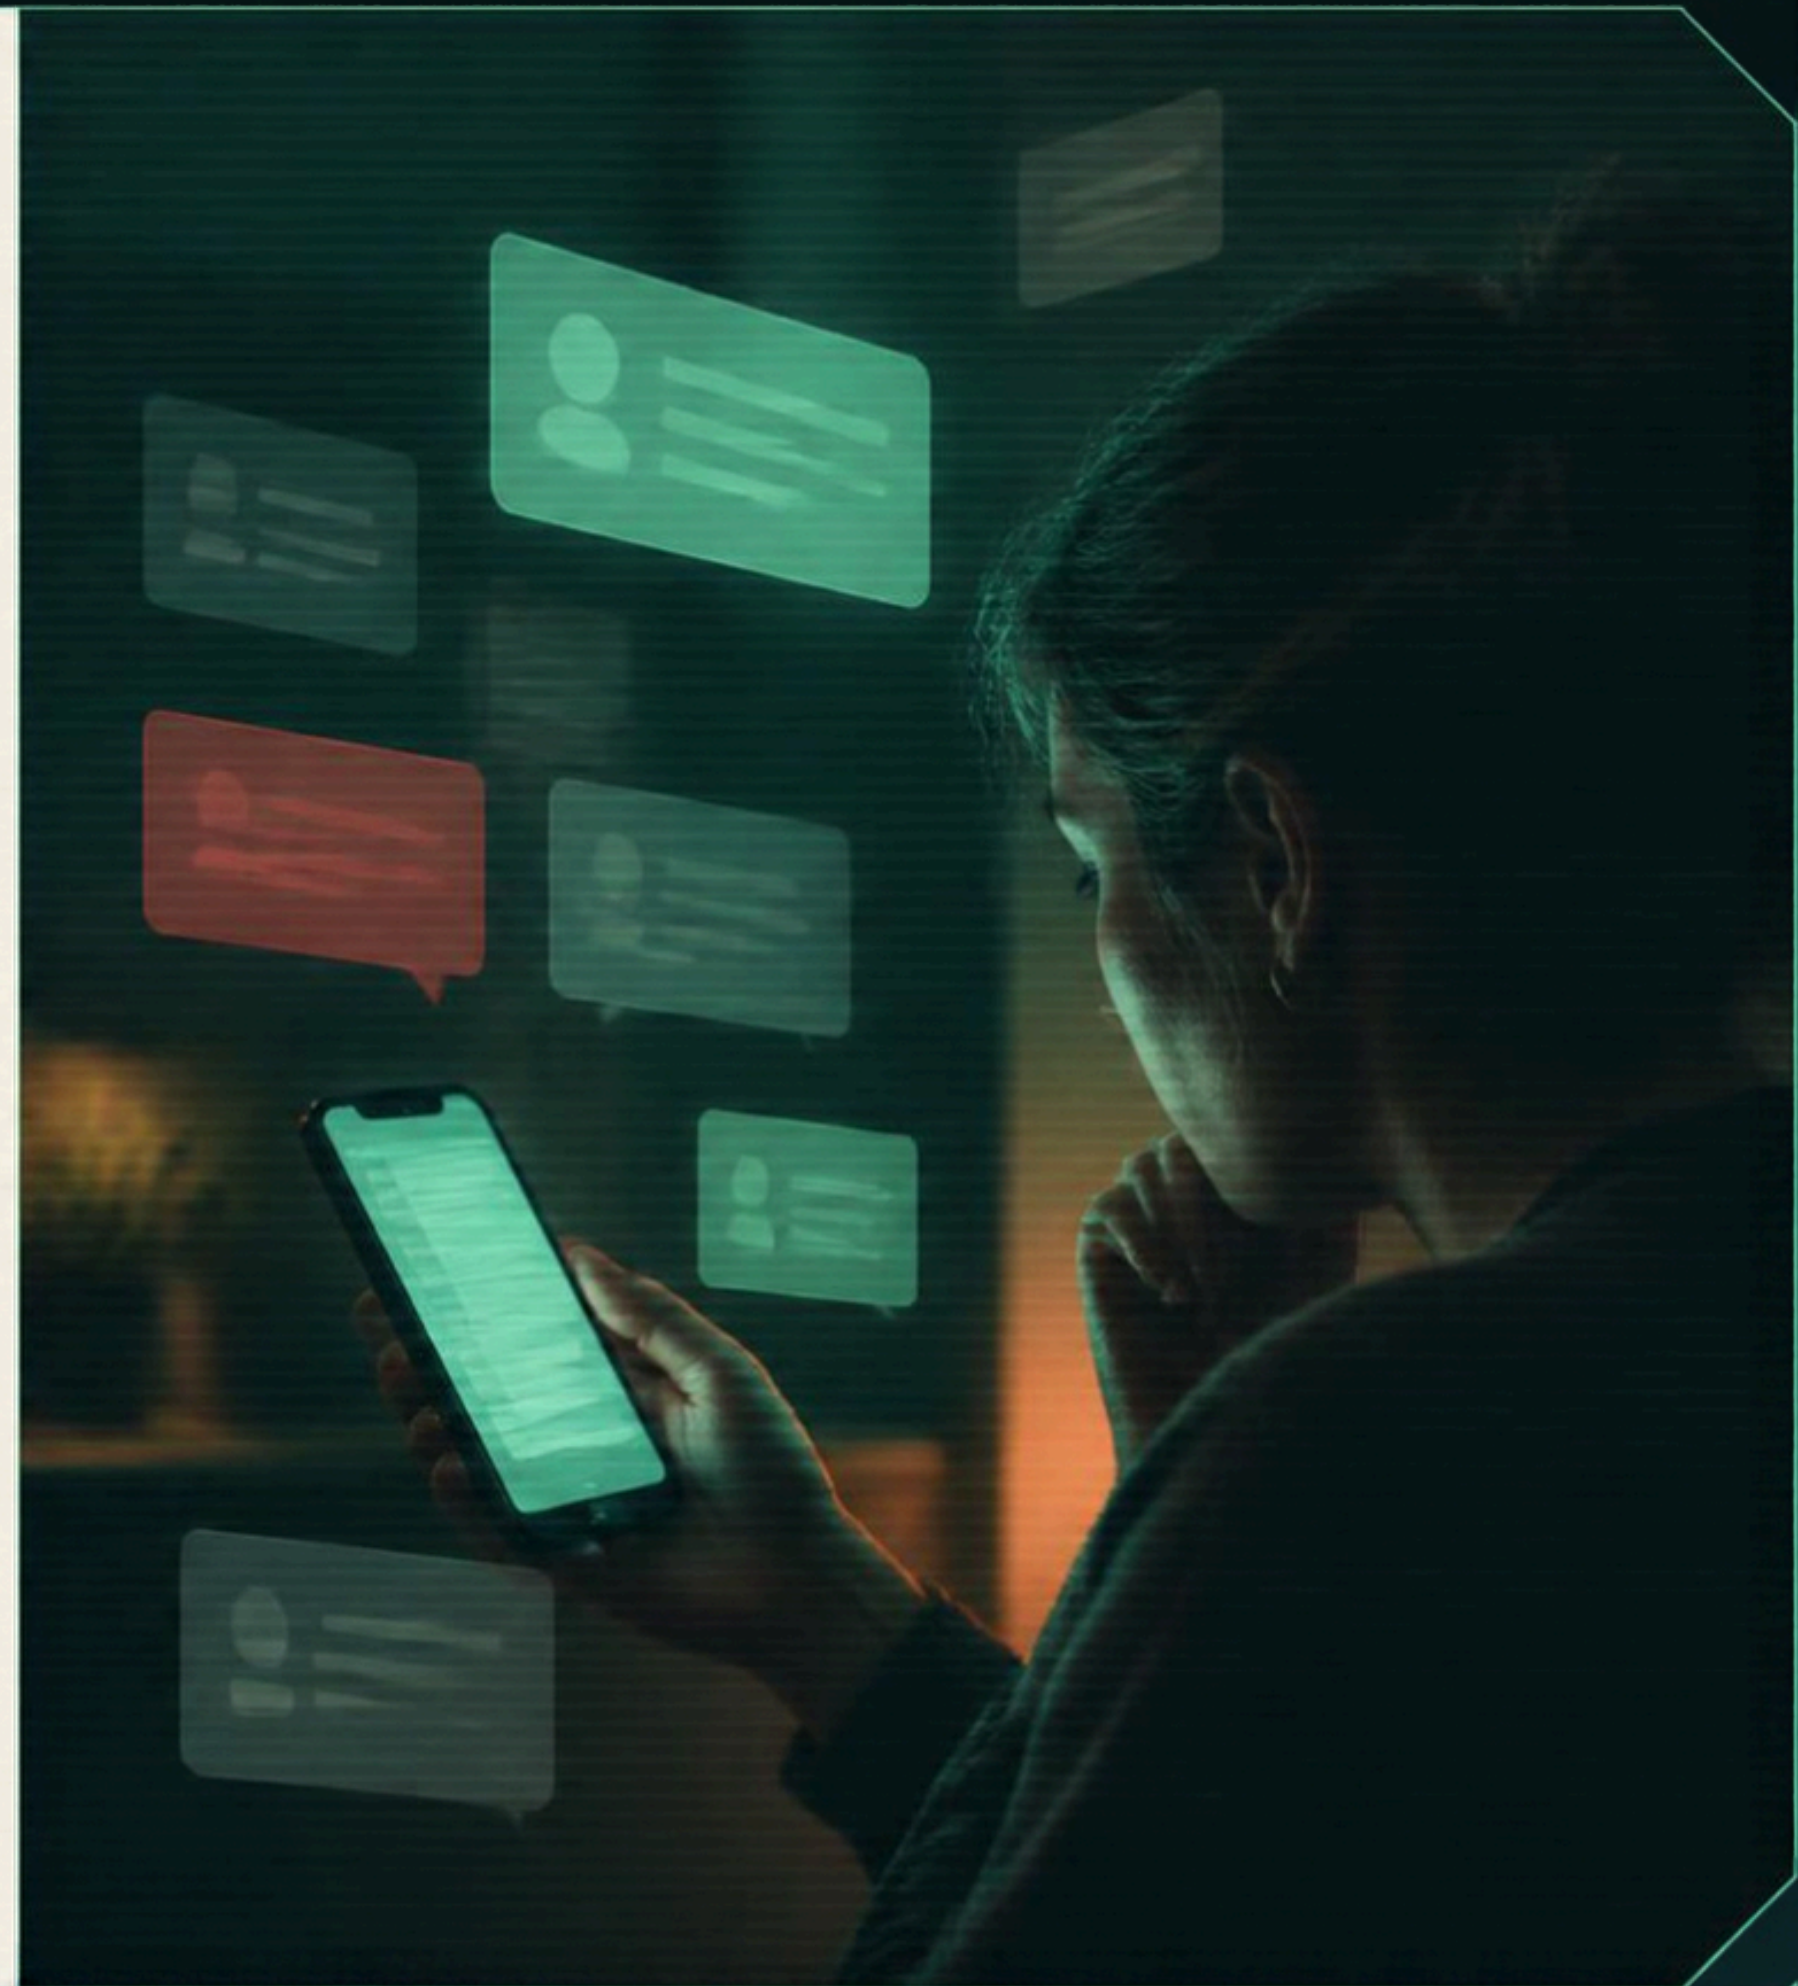

THE PROBLEM

Every message can wear a disguise.

Scams come in many forms:
fake messages, dubious links,
and disguised payment requests.

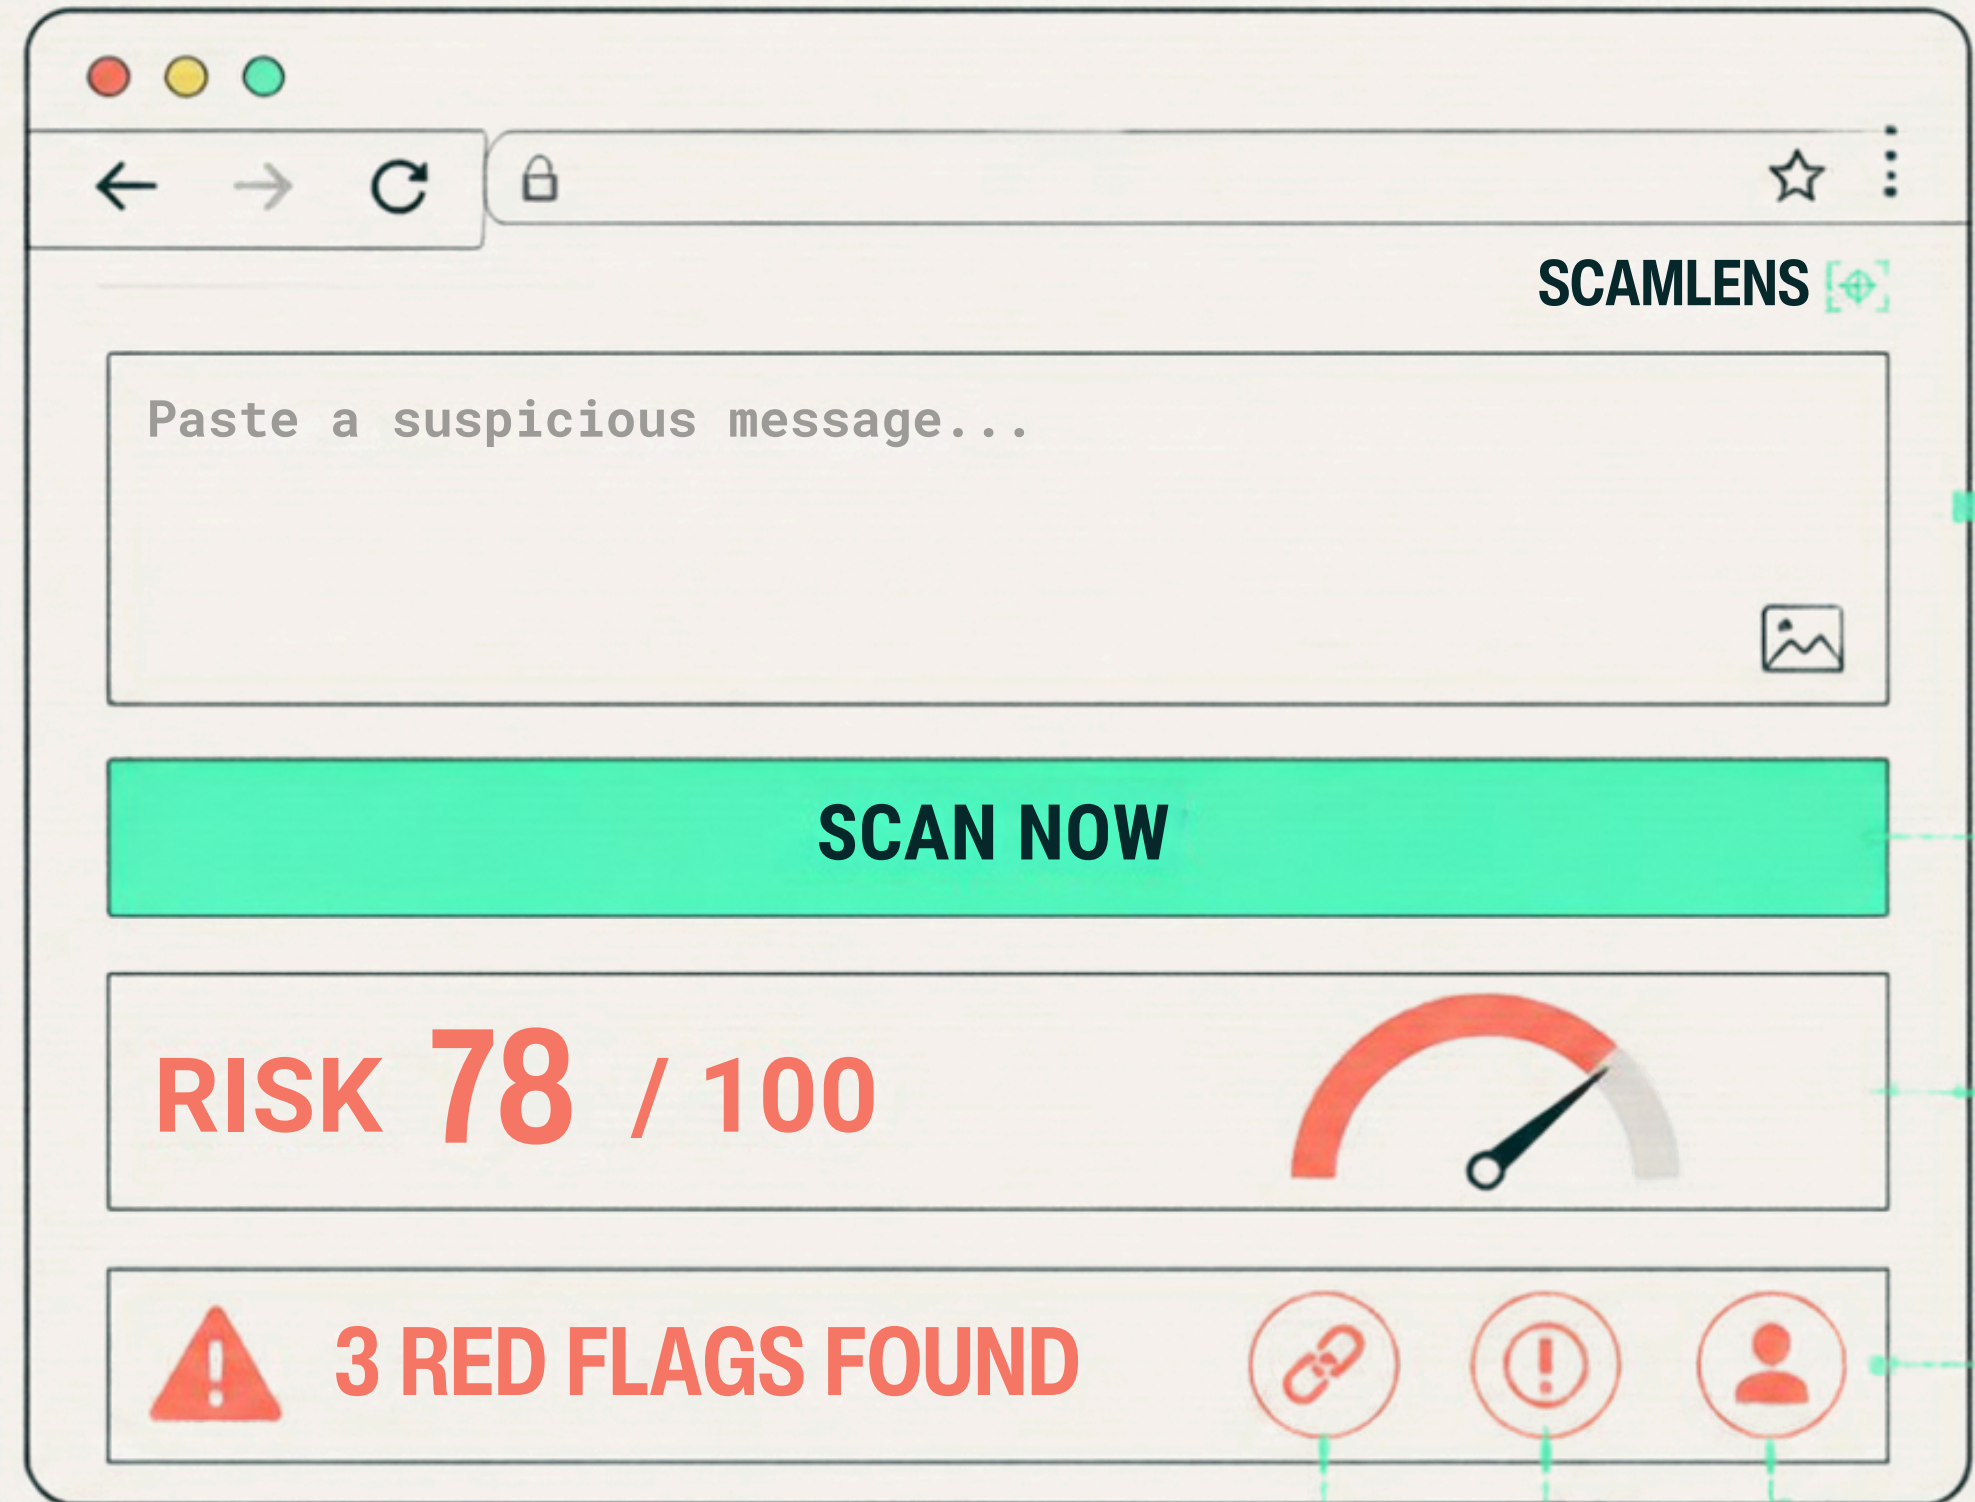

**ScamLens tells you exactly
which red flags are present
and what to do next — in plain words.**

PRIVATE BY DESIGN

How ScamLens works in your browser

- 01 Paste a message or link, or upload a QR image
- 02 Scan instantly — no data leaves your device
- 03 Try sample messages to learn the patterns

A mockup of the ScamLens browser interface. At the top, the browser address bar shows navigation icons and a lock icon. The ScamLens logo is in the top right corner of the page. Below the address bar is a large text input field with the placeholder text "Paste a suspicious message...". To the right of the input field is an image upload icon. Below the input field is a prominent orange button labeled "SCAN NOW". Underneath the button, the risk level is displayed as "RISK 78 / 100" in large red text, accompanied by a semi-circular gauge with a needle pointing to 78. At the bottom, a section titled "3 RED FLAGS FOUND" in red text is preceded by a red warning triangle icon. To the right of the text are three circular icons: a broken link, an exclamation mark, and a person silhouette. Dashed lines connect the three red flags section to the three steps in the list on the left.

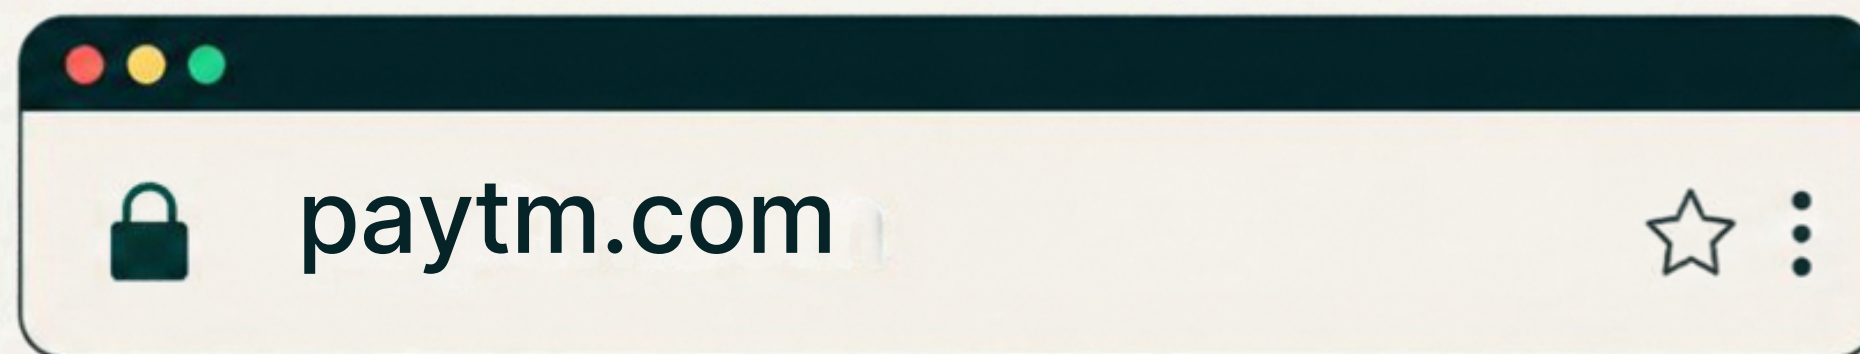

Lookalike domains

Detects brand names in wrong domains or swapped letters.
